

Test Manager

PROFILE

Test manager with 4+ years of experience across banking, SaaS, and enterprise environments. At OTP Bank, owns QA across multiple squads in the Daily Banking tribe — regression strategy in Xray, release readiness, risk reporting, and coordination between architects, product owners, business analysts, and testers. Grew into the role from hands-on testing and still brings that depth: end-to-end, API, UI, and backend testing across complex systems using REST/SOAP, PL/SQL, Playwright, JMeter, RabbitMQ, and Kafka.

EXPERIENCE

Test Manager

OTP Bank • Budapest, Hungary

Jul 2026 – Present

- Promoted to Test Manager after serving as acting test manager following the previous test manager's departure; own QA across multiple squads in the Daily Banking tribe.
- Act as the main coordination point between architects, product owners, business analysts, and testers — planning testing, allocating work, and reporting progress, risks, and release readiness to management.
- Consolidated testing across parallel projects into a single, coordinated QA process.
- Designed an Xray regression model: one shared, label-filtered test set (domain, product type, execution type), a test plan per release cycle, and product-level test executions populated via JQL — replacing the earlier approach with a modular, automation-ready structure.
- Customised Xray Document Generator report templates so every test run is reported with its own execution status and tester, and linked defects are filtered by release version — giving clearer release-readiness visibility.
- Steer test automation toward API, web-service, and database-level coverage together with the automation engineers.
- Selected by the Product Owner to lead a proof of concept for a different business area, coordinating 3 manual testers and 1 automation tester; reduced the suite from 75 to 30 high-value test cases, reported progress through Xray dashboards, and then took ownership of that area's ongoing regression testing.

Software Tester

OTP Bank • Budapest, Hungary

Apr 2024 – Jun 2026

- Owned end-to-end testing for a large-scale card system replacement project across 3 go-live phases – covering core card lifecycle processes including issuance, activation, status updates, renewals, and replacements.
- Led credit card testing within the squad, coordinating task allocation and tracking execution.
- Contributed to the design and execution of a retail debit card test suite of nearly 1800 cases in Xray, including 320 manually executed test cases.
- Performed REST/SOAP API testing, PL/SQL data validation, and JMeter load testing across card lifecycle flows, and supported pre-go-live pilot testing in a live branch environment.
- Tested messaging system integrations by manually generating RabbitMQ messages and producing and validating Kafka topic messages, including authorization response verification.

Quality Assurance Associate

Kinsta • Remote

Oct 2022 – Nov 2023

- Tested Kinsta's core platform across regression, smoke, acceptance, and UI test cycles, including GraphQL mutation testing via Apollo Studio.
- Tested the MyKinsta dashboard redesign end-to-end, validating both functional behaviour and UI/UX changes across the new experience.
- Coordinated bug triage and assignment across a 9-member QA team, escalating blockers to keep releases on track across distributed teams.
- Tested an internally developed ERP platform with integrated chatbot functionality, covering functional and end-to-end user flows.
- Set up and maintained Docker test environments across microservices, and handled pull request validation on GitHub.
- Owned the release gate – verified that all quality criteria were met before each deployment.

Software Tester

BioSec Group • Budapest, Hungary

Feb 2022 – Aug 2022

- Managed and wrote test cases using TestLink.
- Performed E2E testing on desktop and physical devices.
- Created QA notes and compiled testing guides using Confluence.
- Detected and managed bugs in Jira.
- Collaborated with customers on-site, including Groupama Arena, and via virtual machines.
- Worked closely with developers through daily standups and bug analysis sessions.

IT Support Specialist / Tester

TMX Mobile Solution • Budapest, Hungary

Jan 2021 – Jan 2022

- Performed manual software testing and IT application support for the Vodafone Service System.
- Managed and resolved issue tickets, identifying root causes using MySQL.
- Contributed to functional testing and documentation for Vodafone support workflows.

EDUCATION

Projektcoach Consulting

Business Analyst I. • Budapest, Hungary

2021

Masterfield Training Center

Junior Software Testing Academy • Budapest, Hungary

2020

Petőfi Sándor Grammar School

Matriculation Certificate • Kiskőrös, Hungary

2006–2010

SKILLS OVERVIEW

- **Test management:** test strategy, test planning, regression strategy, release readiness, risk reporting, automation strategy, stakeholder coordination
- **Testing & QA:** E2E testing, API testing, UI testing, backend testing, test design, data validation, load testing
- **Tools:** Xray (incl. Document Generator), Jira, Confluence, TestLink, Insomnia, Postman, SoapUI, Apollo Studio
- **Automation & engineering:** Playwright, CI pipeline support, Docker, GitHub, PL/SQL, MySQL, JMeter, RabbitMQ, Kafka
- **Product & collaboration:** banking/card systems, SaaS products, enterprise systems, bug triage, cross-functional coordination

LANGUAGES

English – B2

PERSONAL PROJECTS

- **Family Recipe App:** Private, iPhone-first PWA for the family, rebuilt from an Eleventy/Markdown prototype on React, TypeScript, and Cloudflare Workers + D1. Includes AI-assisted recipe import from text or screenshots, with a mandatory human review before anything is saved. Own the product decisions, backlog, and testing.
- **AI-assisted 'TestSuite Me' CV Builder:** Led requirements definition, prompt-driven iteration, QA validation, and deployment preparation for an AI-assisted web application prototype focused on ATS-optimised QA resumes.
