

Test Manager

PROFILE

Test manager with 4+ years of testing experience in banking, SaaS and enterprise systems. At OTP Bank I'm responsible for testing across several squads in the Daily Banking tribe: regression planning in Xray, risk reporting, release readiness, and coordination between architects, product owners, business analysts and testers. I started as a hands-on tester and have worked with end-to-end, API, UI and backend testing, using REST/SOAP, PL/SQL, Playwright, JMeter, RabbitMQ and Kafka.

EXPERIENCE

Test Manager

OTP Bank • Budapest, Hungary

Jul 2026 – present

- Promoted to test manager in July 2026, after a period as acting test manager when the previous test manager left.
- Responsible for testing across several squads in the Daily Banking tribe: planning, task allocation, progress and risk reporting, and release readiness.
- Main contact for testing between architects, product owners, business analysts and testers.
- Brought the testing of parallel projects into one coordinated process.
- Set up the Xray regression structure: one shared test set filtered by labels (domain, product type, execution type), a test plan per release cycle, and separate test executions per product, filled via JQL. It replaced the old regression setup, scales better and is easier to automate.
- Reworked the Xray Document Generator templates so each test run appears with its own status and tester, and linked defects are filtered by release version.
- Working with the automation engineers to move automated coverage to the API, web service and database level.
- Chosen by the Product Owner to lead a proof of concept in another business area with 3 manual testers and 1 automation tester. Cut the test suite from 75 to 30 high-value cases, reported progress in Xray dashboards, and then took over regression testing for that area.

Software Tester

OTP Bank • Budapest, Hungary

Apr 2024 – Jun 2026

- Tested a large card system replacement end to end across 3 go-live phases, covering issuance, activation, status changes, renewals and replacements.
- Led credit card testing in the squad: split up the work and tracked execution.

- Helped design and run a retail debit card test suite of almost 1,800 cases in Xray, 320 of them executed manually.
 - Did API testing (REST/SOAP), PL/SQL data validation and JMeter load testing on card lifecycle flows, and supported pilot testing in a live branch before go-live.
 - Tested messaging integrations: generated RabbitMQ messages by hand, and produced and checked Kafka topic messages, including authorization responses.
-

Quality Assurance Associate

Kinsta • Remote

Oct 2022 – Nov 2023

- Tested Kinsta's core platform in regression, smoke, acceptance and UI cycles, including GraphQL mutation testing in Apollo Studio.
 - Tested the MyKinsta dashboard redesign end to end, both the functionality and the UI/UX changes.
 - Coordinated bug triage and assignment for a 9-person QA team and escalated blockers so releases stayed on schedule.
 - Tested an in-house ERP platform with a built-in chatbot, covering functional and end-to-end flows.
 - Set up and maintained Docker test environments for microservices, and validated pull requests on GitHub.
 - Owned the release gate: checked that every quality criterion was met before each deployment.
-

Software Tester

BioSec Group • Budapest, Hungary

Feb 2022 – Aug 2022

- Wrote and managed test cases in TestLink.
 - Ran end-to-end tests on desktop and on physical devices.
 - Wrote QA notes and testing guides in Confluence.
 - Logged and tracked bugs in Jira.
 - Worked with customers on-site, including at Groupama Arena, and through virtual machines.
 - Worked closely with developers in daily standups and bug analysis sessions.
-

IT Support Specialist / Tester

TMX Mobile Solution • Budapest, Hungary

Jan 2021 – Jan 2022

- Manual testing and IT application support for the Vodafone Service System.
- Handled support tickets and found root causes using MySQL.
- Helped with functional testing and documentation of Vodafone support workflows.

EDUCATION

Projektcoach Consulting

Business Analyst I · Budapest, Hungary

2021

Masterfield Training Center

Junior Software Testing Academy · Budapest, Hungary

2020

Petőfi Sándor Grammar School

Matriculation Certificate · Kiskőrös, Hungary

2006–2010

SKILLS OVERVIEW

- **Test management:** test strategy, test planning, regression strategy, release readiness, risk reporting, automation strategy, stakeholder coordination
- **Testing & QA:** E2E testing, API testing, UI testing, backend testing, test design, data validation, load testing
- **Tools:** Xray (incl. Document Generator), Jira, Confluence, TestLink, Insomnia, Postman, SoapUI, Apollo Studio
- **Automation & engineering:** Playwright, CI pipeline support, Docker, GitHub, PL/SQL, MySQL, JMeter, RabbitMQ, Kafka
- **Product & collaboration:** banking/card systems, SaaS products, enterprise systems, bug triage, cross-functional coordination

LANGUAGES

English (B2)

PERSONAL PROJECTS

- **Family Recipe App:** A private recipe app for my family, made for iPhone. It started as an Eleventy/Markdown site and I rebuilt it with React, TypeScript, Cloudflare Workers and D1. Recipes can be imported from text or screenshots with AI, and nothing is saved before someone reviews it. I make the product decisions, keep the backlog and do the testing.
- **TestSuite Me CV Builder:** A resume builder for QA roles, built with AI coding tools. I wrote the requirements, iterated on the prompts, tested it and prepared the deployment.
